Inovia
Clinic | Care | Homecare | Assist

The care bed with innovative ideas
Advantages

Mattress base height adjustment from 22 - 77 cm
The innovative 55 cm adjustment range makes this care bed ideal as a low-entry bed for fall protection.

24-volt drive system as standard
By using the 24-volt drive system, the prescribed intervals for leakage current testing are extended to such a degree that leakage current testing is no longer required during or beyond the expected service life of the bed. Please refer to the instruction manual for the length of this period. The first leakage current test has already been conducted by the manufacturer. The 24-volt extra-low voltage saves electricity and enhances the safety of occupants.

Safe working load of 225 kg
Also suitable for heavier persons.

Telescopic safety sides as standard
The telescopic safety sides supplied as standard are easy to raise in 2 stages. If only the half at the head end is raised, the resident has ample room for getting in and out of bed.

Mattress base with sliding backrest in line with German Nursing Association recommendations
The retracting backrest protects the resident against uncomfortable shearing forces while the mattress base is adjusted and thus contributes to the prevention of pressure ulcers. The retraction of the backrest enlarges the seating area for the resident and increases his comfort significantly.
Inovia care bed
